The totally secure communication gateway

Hosted with Amazon Web Services, the PyronixCloud permits access between HomeControl+ enabled panels and the HomeControl+ App:

- **Control user access**

App users on the system can be activated or deactivated. Not only that but each time a user attempts to connect to the control panel via the HomeControl+ App, the PyronixCloud will authenticate their access for maximum security.

- **Highly secure connection**

The HomeControl+ App and PyronixCloud communications are encrypted to the highest standard.

- **Nothing to hack**

No sensitive user data is stored on the PyronixCloud, so no personal data is ever at risk.

- **Polling the panel**

The PyronixCloud monitors the presence of the HomeControl+ enabled system through polling, which occurs every eight minutes over secure IP communications. This can be changed in the PyronixCloud, dependent on the network quality.

- **Push notifications**

The PyronixCloud enables the customisation of the push notifications that each HomeControl+ App user receives, when the various events that can happen on the system occur.

Save money, faster installation, retain customers & increase profitability with the PyronixCloud

- **No on-site IT configuration**

By connecting HomeControl+ enabled panels through a cloud server, there is no need to set up static IP addresses or configure the network connection on site; instead you simply set up an account on PyronixCloud.com.

- **Recurring revenue & retention**

Streams of recurring revenue can be established by offering PyronixCloud management services; managing this or passing access to users. This increases customer retention and makes the system more profitable.

- **Remote diagnostics & control**

The PyronixCloud allows the remote programming and diagnosis of systems using our InSite UDL software. This saves time, money and increases the number of installations that can be completed.
